FOR IMMEDIATE RELEASE

Community Bows New Member of Growing iBOX Family

Chester, PA - Community Professional Loudspeakers has introduced the newest addition to its acclaimed iBOX line of professional installation loudspeakers. The i2W8 is a two-way, full-range loudspeaker system designed to provide high quality music and voice reproduction, offering smooth, ultra-wide, horizontal coverage in a compact, attractive package.

Engineered for use in under-balcony, down-fill and distributed installations, the i2W8 enclosure and baffle are constructed of 13-ply Baltic birch, with low mass carbon fiber LF drivers and titanium diaphragm tweeters. As with the entire iBOX line, all drivers are Ferrofluid-cooled. The ultra-wide 120-degree HF pattern control provides uniform coverage over the widest possible bandwidth. The unique "Super-V" LF drivers configuration provides an exceptionally uniform midrange pattern far superior to that achieved with a conventional flat wooden baffle.

With 600W power handling, the i2W8 is available in black or white painted finish, with a matching steel mounting yoke included. It can also be ordered with a factory-installed 200W autoformer for 70V/100V applications (model i2W8T). Its six-sided, low profile enclosure and ultra wide coverage pattern is ideal for use as a monitor, stage front fill or side fill as well.
